### Bhrgu Saral Paddhati aka BSP (House-Age correspondence)

General BSP — A Snapshot Prediction Method (also mentioned in BPHS):

Each house starting from the Ascendant represents one year in the life of an individual. This goes in a cyclical manner with a 12-year period after which the cycle repeats itself from the Ascendant.

Divide the ongoing age by 12. Note the remainder obtained. Things related to the house whose rank is equal to remainder (see 12th house if remainder is zero) are likely to happen at that age. This consideration is made irrespective of the planets or signs in the house. For example, 1st house related event "Birth" happens at age 1. Similarly, speech training and early learning occur at age 2. 12th house i.e. Loss of self (Puberty) takes place commonly at age 12. College education (5th house) begins usually at age 17 (Remainder 5).

Additionally, note the placement of the lord of the relevant house. The significations of the planet and the house occupied by it will also contribute the event. Also note the houses in which those signs are placed in the natural zodiac.

For example, in 28th year, 4th house related results are expected. Now, for a Cancer Asc chart, in 28th year, 4th house has sign Libra whose lord is Venus. Libra is 7th house in natural zodiac. So marriage can occur in the 28th year. Foreign travel can take place since 7th house also implies travel abroad. One can become mother at 28th year as 4th house is mother.

Specific BSP Techniques: (always refer to the running age) (count in the usual zodiacal direction; don't go reverse for nodes or retrograde planets)

(Follow the procedure described above to synthesize the results; predict multiple results if realized and applicable)
