PREFACE

'Blind chart analysis' is a procedure in which an astrologer predicts the past events and present condition of a native only by looking into the horoscope, without having a prior knowledge about the native. Astrologers practice this method for many reasons: for birth-time rectification, to bring faith in the client about the efficacy of astrology, to test the astrological techniques, to find out which method suits best for the given case, and to demonstrate his/her predictive abilities.

To do 'blind chart analysis' successfully an astrologer should have very sound knowledge of the subject, vast experience, good intuition and a bit of luck also. I have made it a rule that for every client who approaches me for astrological counseling I would apply 'blind chart analysis'. Though I use both conventional methods and naadi techniques of Vedic Astrology in my practice, the Nandi Naadi method is the main tool for almost 95%. It will normally take 10-20 minutes to formulate these

questions. Applying the Naadi rules given in my book SARFAROSH is the key to my success. I do not claim infallibility, and it is also not possible in predictive sciences like astrology. If more than 75-80% of events predicted turn out to be true then you may consider an astrologer to be successful.

After I shared few case studies of blind chart analysis on my facebook page I got several requests to reveal the astrological logic/reason behind the events that I have predicted. This small book is the result.

This book contains 10 case studies where I have applied the technique of 'blind chart analysis' - predicting the past and present condition of the native without knowing anything beforehand. The names and birth details of the clients have been withheld to protect their privacy. The text appearing in red color are the questions put by me to the client. Blue color text presented in parenthesis explains the astrological logic. And, the text in black color is the response of the client. I have given enough hints for an intelligent student

to grasp the techniques I have used. I have deliberately refrained from explaining out everything as it is said in Vedas "Paroksha Priyahi Vai Devah", meaning the deities prefer indirect and concealed things than revealing everything.

I want to add one important thing in this context. Predicting the past events of an unknown native is comparatively easy for a competent astrologer. However, for the future events to happen as predicted is significantly different.

I thank my clients whose charts I have used in this book and also my facebook friends and readers who requested to reveal the astrological logic, which was the primary reason for this book to take its present shape. I hope this book would highlight the marvels of Vedic Astrological methods. I would love to hear from the readers about their impression and opinions. I have plans to expand this into a comprehensive book in future with about 100 case studies of 'blind chart analysis'.
